Blue River IT announces new training solutions offering, Blue River Training.

With today’s ever-growing need for network security and (IA) Information Assurance; awareness and refresher training has become a critical function among all DoD Information Systems & Government Agencies. Continuing Education and Recertification initiatives is not only a requirement in meeting the DoD’s Directive 8570.1, but is an imperative management tool being used to centralize network infrastructure & security. Cyber security threats are currently being reported at an all time high and fully acknowledged by top U.S. Corporations and Government agencies. Joint efforts centered in arming workforces with the necessary skills and expertise in secure operations is helping these initiatives among the War-fighting community.

Blue River Training represents a new generation in technical, certification and specialty training services geared towards IA Management. Our cost effective, flexible, blended-delivery model ensures you get exactly what you require --industry leading training -- on time, just right and within budget.

Blue River Training spans the spectrum from commercial technical and certification technology training to custom training solutions for unique customer operational or IT environments. Training is delivered by the best certified instructors to help get your workforce proficient and compliant, while also helping employees adhere to yearly refreshment guidelines & directives: (DOD 8570 IA Certification Training, PMP, ITIL Training, Cisco, Microsoft, Cyber Security). Other prime certifications & courses include:

Sample of Blue River Training

Technical Training	Certification Training	Specialty Training
Database Administration	DOD 8570 IA Certification	Integrated Technology Training
Data Storage Technologies	Microsoft Certifications	Custom Curriculum Development
Operating Systems	Cisco Certifications	Workshops/Seminars
Networking and Wireless	PMP Certification	COR/COTR Training
Software Development	ITIL (including V3) Certification	Medical IT Training
Information Assurance	VMWare Certification	Leadership/ Management

Three Things that Set Blue River Training Apart

Real World Experience – Blue River Training provides learning rooted in real world, implementation-based instruction. We have collective decades of in-house and alliance partner training experience. Our instructors focus on practical application based on their own experiences in the industry, not academic theory. The result is better class material retention, higher test pass rates, and a more satisfying learning experience for our customers.

Integrated Technology Training Solutions - Often, training vendors teach “point” or single technology solutions. But with complex, integrated IT environments, there are likely multiple storage, network,

operating systems, and application technologies present. Blue River Training logically brings together these elements to get your operators and administrators to high levels of proficiency; saving you time, money and helping you better leverage the resources you've already invested.

Responsive Solutions – Training vendors often focus on complicating a training solution with features and add-ons the customer doesn't want or need. Blue River Training will review your requirements, your timeframe constraints and your budget to provide the best quality training solution possible – without the fluff or the premium price tag.
